Excerpt from Science for Beginners an Introduction to the Method, and Matter of Science

The writer of this book remembers very clearly that in his boyhood days he had an intense desire to investigate those things that were immediately about him. He had a dim notion that the problems of everyday life would prove most interesting if they could be solved in some way by himself. To him it seemed far more captivating to obtain knowledge through his own experiments than by merely reading from a book. This thought has remained with him all through the years, and it is because of it that this book has been written; the purpose has been to provide a book that will permit you to get the information for yourself.

The writer confesses one great anxiety, however. Will you, the boys and girls who use this book, have the courage to carry on the work in accordance with the spirit of the book? Will you do the work for yourselves, make the observations, keep a notebook, and so learn to know by doing?

If you desire to secure the best results from the use of this book, or any book for that matter, you must have a well-laid-out plan and must not do your work in the haphazard way that, is characteristic of many boys and girls of your age. You are asked to study carefully the suggestions that follow, and, if you think them worth adopting, to observe them to the best of your ability.

1. Make out a definite daily program for every hour of the day, and especially the exact time that you will devote to each of your studies.
