## **If you could find out the day you'll die - would you?**

Getting her expiry date doesn't sound like much of a birthday present to Rae. But it's been that way for everyone since the cryptograph - a complex biological algorithm - was introduced.

Now, the government can determine with precise accuracy the death date of every human being on the planet. Society is sorted according to longevity - like Transients who have less than ten years left to live and are thus considered useless to society, Interims who are grudgingly tolerated, or Constants who are automatically considered elite.

Everyone is tested at sixteen, but Rae decides to opt out while she still can. Death is inevitable and despite what the system thinks, when or how shouldn't matter.

But when Rae's intentions to avoid the test are impeded and she is determined Transient, life as she knows it will never be the same again ...
