This book is written mainly by two authoritative scholars in the field of cognitive neuroscience, Bernard J. Baars and Nicole M. Gage. They use a unique way to present knowledge and progress in this area. Many majors in the field of elementary education require students to have a basic understanding of cognitive neuroscience. However, most of present textbooks are prepared for students majoring in biology with less consideration of readers whose majors are psychology or other relevant disciplines. This book-Cognition, Brain and Consciousness: An introduction to Cognitive Neuroscience (2nd Edition) presents basic concepts of cognitive neuroscience in a unique theme-writing way. The chapters and sections within the book are arranged in step by step so that readers without any neuroscience or biological background can easily understand it. Authors apply simple and beautiful drawings to complete construction of brain, which is quite impressive. Each chapter is accompanied by exercises for further thinking and drawing exercises to help deepen readers understanding.
